PRIYA PANDEY

Mumbai, Maharashtra | +91 8082192502 | priyapandey5719@gmail.com

SUMMARY

Software Engineer / Cloud Engineering Specialist with approximately 9+ years of experience in building enterprise applications, automation frameworks, API services, and cloud-based solutions. Experienced in developing AI-powered applications using C#, RestAPI, Kafka, OpenAI, Gemini, LangChain, LangGraph, RAG pipelines, and vector databases. Hands-on experience designing and implementing intelligent workflows, AI agents, LLM integrations, prompt evaluation frameworks, and enterprise knowledge retrieval solutions using Azure AI Search Index. Strong background in AZURE, Docker, Kubernetes, PostgreSQL, CI/CD, and scalable microservice architectures. development, .NET Core, ASP.NET, Web API, SQL Server, Azure PaaS, Azure Storage, Azure Functions, ADF pipelines, Azure Foundry,Redis Cache, Azure Key Vault, Azure Web Apps, and cloud-based migration initiatives.

Combines software engineering expertise with exposure to OpenAI, LLM, Copilot, Logic Apps, Docker, Kubernetes, Azure Service Bus, Cosmos DB, PostgreSQL, and AI-enabled application development to build reliable, production-ready AI systems with a focus on performance, observability, evaluation, and business impact

Recognized through customer-delight and performance awards, Azure certifications, and client/business appreciation for strong ownership, delivery focus, problem solving, and sincere work approach.

CORE COMPETENCIES

Category	Skills
Programming	C#, .NET, ASP.NET Core, MVC, Web API, LINQ, Entity Framework, SQL, JavaScript, HTML/CSS,ReactJS,Python, PowerShell, azure Foundry
Cloud	Azure,AWS.
Backend / APIs	REST APIs, Windows Services, WCF/Web API, microservice-style integrations, IIS deployment
AI / GenAI Exposure	OpenAI, LLM, Copilot, Claude, Agentic AI, Azure AI, prompt-based automation exposure
Databases	SQL Server, PostgreSQL, Cosmos DB, MySQL
DevOps / Tools	Azure DevOps, CI/CD pipelines, Git, SVN, TFS, Visual Studio, VS Code, SSMS, Swagger, ADO Boards, SNOW, Jira, Confluence
Automation	n8n,PowerShell, UiPath, iMacro, Open Connect RPA, Selenium, Logic Apps
Platforms	Windows Servers, Linux, Unix, AWS, Docker, Kubernetes
AI Evaluation	Prompt Testing, Guardrail
Frameworks	LangChain, LangGraph

WORK EXPERIENCE

LTIMindtree - Blueridge, Pune | Liberty | June 2026 – Present

Client: Liberty Life Insurance
Role: AI Engineer | .NET & Azure Developer

Project Summary: Liberty insurance applications supporting the end-to-end new business and policy processing lifecycle, including Blueprint Online New Business for Risk and Investment quote creation, Paperless for electronic forms and digital signatures, Tele-underwriting for client questionnaires, and Qlink Services for third-party integration, affordability checks, policy payment processing, and loading STOP ORDER policies into Horizon.

Roles&Resposibility:

- Developed AI-enabled insurance solutions for Liberty's Blueprint EP platform using Azure AI Foundry, Azure OpenAI, .NET, and Azure DevOps, automating business processes, optimizing proposal generation workflows, and integrating enterprise systems across the insurance domain.
- Developed and enhanced **Blueprint EP (Electronic Proposal)**, a business-critical insurance platform used for generating risk and investment policy proposals. Designed and implemented scalable .NET-based solutions, integrated enterprise

applications through APIs and BizTalk services, and optimized business workflows across Quotes, Navigator, LPF, and policy processing systems.

- Contributed to AI-driven automation initiatives using Azure AI Foundry and Azure OpenAI to streamline repetitive business operations, improve decision-making, and enhance operational efficiency within the insurance domain. The application leverages a multi-tier architecture, web services, and database-driven workflows to support large-scale policy onboarding and proposal generation.
- Designed and developed enterprise applications using C#, ASP.NET MVC, SQL Server, Entity Framework, and Web APIs.
- Built AI-powered agents using Azure AI Foundry and Azure OpenAI to automate repetitive operational tasks and improve productivity.
- Developed and integrated REST APIs, WCF Services, and BizTalk workflows with downstream insurance systems.
- Implemented business rules, validation frameworks, and workflow automation for insurance proposal processing.
- Developed intelligent document-processing and data-validation solutions to reduce manual effort.
- Optimized SQL queries, stored procedures, and database operations to improve application performance and scalability.
- Implemented dependency injection, background job processing, and logging frameworks for maintainable application architecture.
- Collaborated with business stakeholders to identify automation opportunities and deliver AI-enabled solutions.
- Utilized Azure DevOps and TeamCity for source control, CI/CD pipelines, code reviews, and release management.
- Contributed to cloud modernization initiatives and AI adoption strategies within the insurance ecosystem.

LTIMindtree - Blueridge, Pune | Archer-Daniels-Midland | Dec 2025 – June 2026

Client: ADM
Role: AI Engineer | .NET & Azure Developer

Project Summary: Management Oilseeds Reporting System (MORS) Overview

MORS is a unified platform for accessing, validating, and managing business critical data. It centralizes data operations, ETL oversight, and validation tools into one streamlined, easy to use workspace.

Roles & Responsibility:

- Worked as a Full-Stack C# & React Developer on the RR-FP Silverlight-to-React Migration (Read-Only) project for the Archer-Daniels-Midland (ADM) account, contributing to the modernization of the legacy Silverlight application using React and C#/.NET technologies.
- Designed and developed enterprise Agentic AI and Generative AI solutions using C#, .NET Core, ASP.NET Core Web API, Azure AI Foundry, Azure OpenAI, OpenAI, Gemini, LangChain, and LangGraph.
- Developed Retrieval-Augmented Generation (RAG) pipelines to integrate enterprise knowledge repositories with LLMs, improving contextual and grounded information retrieval.
- Implemented semantic and vector search using Azure AI Search, ChromaDB, Pinecone, embeddings, and vector databases for retrieving relevant enterprise documents.
- Built AI agents and multi-agent workflows supporting planning, reasoning, tool calling, retrieval, memory, and workflow orchestration using Azure AI Foundry Agents, LangGraph, and LangChain.
- Developed REST APIs and real-time AI services using C#, .NET Core, ASP.NET Core Web API, and WebSockets to integrate AI capabilities with enterprise applications.
- Integrated Azure OpenAI, OpenAI, Gemini, LLMs, Copilot, enterprise REST APIs, and internal business services to automate knowledge-driven and repetitive business processes.
- Developed serverless and event-driven integrations using Azure Functions, Logic Apps, Azure Service Bus, Kafka, and Azure Storage.
- Integrated AI applications with SQL Server, PostgreSQL, Cosmos DB, Redis Cache, Azure Storage, and enterprise data sources for business data and knowledge retrieval.
- Secured cloud-based applications and AI services using Azure Key Vault and Azure-based configuration and identity mechanisms.
- Containerized .NET Core and AI microservices using Docker and Kubernetes and supported automated deployments through Azure DevOps and CI/CD pipelines.
- Implemented AI evaluation mechanisms covering prompt validation, hallucination detection, groundedness, output verification, response quality assessment, and guardrails.

- Established observability, logging, tracing, and monitoring using Application Insights, Azure Monitor, Langfuse, and cloud monitoring tools to track AI interactions, latency, failures, and application performance.
- Contributed to scalable microservice and cloud-native architectures using Azure PaaS, Azure Web Apps, Docker, Kubernetes, Redis Cache, REST APIs, and CI/CD.
- Supported cloud-based migration and modernization initiatives, integrating existing .NET applications and enterprise services with Azure and AI capabilities.
- Coordinating with other teams working on the same project.
- Developed Generative AI and Agentic AI solutions using Azure AI Foundry, Semantic Kernel, Copilot technologies, .NET/C#, and ASP.NET Core.
- Implemented semantic search and RAG (Retrieval-Augmented Generation) to provide context-aware responses from enterprise knowledge sources.
- Used embeddings and vector-based retrieval to add contextual knowledge and memory to AI applications.
- Leveraged Semantic Kernel to abstract AI/LLM integration and orchestrate prompts, plugins, application functions, and AI workflows.
- Designed effective prompt-engineering strategies to improve the relevance and quality of AI-generated responses.
- Extended AI applications using Semantic Kernel plugins and RAG-based knowledge retrieval.
- Built multi-agent workflows for handling complex tasks through specialized AI agents.
- Integrated AI-enabled backend services with React, JavaScript, TypeScript, ASP.NET Core, and REST APIs.
- Applied event-driven architecture using Apache Kafka and RabbitMQ for asynchronous communication and message processing.
- Implemented monitoring, debugging, logging, and observability for AI-enabled and distributed applications.
- Worked with Microsoft AI technologies including Azure AI Foundry, Microsoft Copilot, Microsoft Fabric, Semantic Kernel, and Azure services.

Key Achievements

Received multiple appreciation notes from client and business leadership for work ethics, delivery ownership, and commitment to excellence.

L&T Infotech - Embassy, Pune | Microsoft | Oct 2023 - Nov 2025

Client: MICROSOFT
Role: Cloud Specialist/ Azure PaaS Development Engineer | .NET & Azure Developer

Project Summary: Microsoft Azure Portal is a web-based management interface used to create, configure, deploy, monitor, secure, and manage Azure cloud resources from a centralized console.

Roles & Responsibility:

- Developed and managed cloud-native .NET and AI-enabled applications on Microsoft Azure, leveraging Azure Portal and services such as Azure Functions, App Service, Azure Storage, Redis Cache, Cosmos DB, Azure SQL, Azure Data Factory (ADF), Service Bus, Event Grid, Event Hub, Application Insights, Key Vault, Microsoft Entra ID, Azure AI Foundry, Azure OpenAI, Azure AI Search,Azure cognitive service and Azure AI Services. Worked on REST API development, cloud integration, AI/LLM integration, RAG, vector search, automation, application deployment, authentication and authorization, monitoring, performance optimization, troubleshooting, and CI/CD to deliver scalable, secure, and reliable Azure solutions.
- Developed AI-powered chatbot solutions using Azure OpenAI Service and Azure AI Foundry.
- Developed and enhanced existing applications using ASP.NET Core and related .NET technologies based on client requirements.
- Worked as Azure PaaS development engineer for Azure Storage Account and Azure Cache for Redis, collaborating closely with product group teams.
- Implemented ADF pipelines involving Azure Functions and storage functions; supported CI/CD pipeline build/update activities for projects in scope.
- Created PowerShell scripts for Azure environment automation and helped deploy automation using Azure Runbook.
- Collected and analyzed logs to find root causes, mitigate issues, and collaborate across teams to resolve client-facing problems.
- Assisted clients with RBAC roles, managed identity, Azure lifecycle management, blob tiers, REST API error calls, and Redis Cache best practices.
- Built proof-of-concepts for Azure VM, Azure Storage, Azure Redis Cache, Azure Networks, App Services, and documented product issues for engineering teams.

- Built a scalable enterprise RAG solution using .NET Core, Azure AI Foundry, Azure OpenAI, Azure AI Search, embeddings, vector search, and vector databases for enterprise knowledge discovery.
- Developed Agentic AI workflow automation integrating AI agents, enterprise APIs, retrieval systems, and business processes to automate repetitive activities.
- Improved reliability of AI-powered applications through evaluation pipelines, prompt validation, guardrails, hallucination detection, groundedness evaluation, observability, and continuous monitoring.
- Contributed to production-ready Generative AI, Agentic AI, RAG, LLM, REST API, microservices, and Azure cloud solutions using established .NET engineering practices.

Cognizant - Airoli, Mumbai | Horizon BCBS NJ | Jan 2022 - Sep 2023

Client: HBCBS
Role: Associate Engineer | .NET & Azure Developer

Project Summary:

The Horizon Process Automation team aims at developing automation robots to carry out various tasks. The main purpose of this automation is to reduce the manual intervention process of processing a Healthcare claim.

Roles & Responsibility:

- Worked on Horizon Process Automation initiatives focused on reducing manual intervention in healthcare claims processing.
- Coded, implemented, integrated, troubleshot, and debugged software programs using .NET, SQL Server, Open Connect RPA automation tool, UiPath, iMacro browser automation, Selenium Automation, and Azure Cloud.
- Conducted unit testing and integration testing while resolving technical issues during project execution.
- Handled a team of 4 members and coordinated with business teams to understand requirements and implementation scope.
- Developed Claims Automation applications and portals using ASP.NET, HTML, CSS, Microsoft SQL Server, and Open Connect RPA Systems.
- Prepared iMacros automation scripts for unit testing and published/deployed applications in IIS.
- Coordinating with other teams working on the same project.

Cognizant - Vikhroli, Mumbai | ICICI Lombard | Nov 2020 - Dec 2021

Client: ICICI Lombard
Role: Associate Engineer | .NET & Azure Developer

Project Summary: General Insurance Company Limited is a general insurance company in India. It is engaged in general insurance, reinsurance, insurance claims management and investment management.

Roles & Responsibility:

- Worked on the Atlas team for an enhanced CRM application using ASP.NET Core, PostgreSQL, and AWS.
- Understood application features and scope, estimated, designed, and developed modules based on business needs.
- Enhanced features, optimized Web API performance, fixed product defects, performed maintenance, and coordinated with cross-functional teams.
- Used C#, ASP.NET Core 2.1/3.1, Web API, LINQ, PostgreSQL, AJAX, JQuery, AWS S3 integration, data structures, and algorithms.
- Developed RESTful APIs using **ASP.NET Core Web API** following Clean Architecture principles.
- Developed Angular components and integrated frontend functionality with backend APIs.
- Implemented **Azure AD B2C, JWT, custom claims, and role-based authorization** for application security.
- Integrated **Azure Functions, Blob Storage, Key Vault, Managed Identity, and Microsoft Graph API**.
- Implemented background processing and automated workflows using HTTP and Timer-triggered **Azure Functions**.
- Implemented application logging, monitoring, and error tracking using **Serilog and Application Insights**.
- Built **Azure DevOps CI/CD pipelines** for automated deployment of APIs, Angular applications, and Azure Functions.
- Worked with **SQL databases**, API integration, exception handling, debugging, and cloud deployment.

Capgemini - Airoli, Mumbai | Royal Mail Group | Jun 2017 - Nov 2020

Client: RMG
Role: Senior Software Engineer | .NET & Azure Developer

Project Summary: Royal Mail Group is the Postal service and courier company in the United Kingdom. My self belongs to the Client Server team working as a Sr Analyst/Software Engineer, objective of this project is to support multiple Applications developed in various technologies including Enhancement and other related activities.

Roles & Responsibility:

- Supported and enhanced multiple Royal Mail Group client-server applications developed in C#, ASP.NET, MVC, Web API, MS SQL Server, JavaScript, ADO, LINQ, JQuery, IIS, SSIS, SSRS, Entity Framework, AJAX, AngularJS, and UiPath.
- Implemented application enhancements, performance optimizations, documentation, secure code repository practices, unit testing, smoke testing, deployments, and business continuity support.
- Worked on incident resolution, service requests, change requests, defects, data fixes, integrity queries, batch interfaces, SQL stored procedures, relational database design, and query optimization.
- Applied automation ideas through UiPath and RPA to reduce incoming incident flow; resolved SNOW tickets within SLA.
- Supported builds and deployments across testing and production environments and participated in knowledge transfer on functional modules.

Capgemini - Vikhroli, Mumbai | Lloyd Register | May 2017 - Jun 2017

Client: LR
Role: Software Engineer | .NET & Azure Developer

Project Summary: LR is a leading international provider of classification, compliance and consultancy services to the marine and offshore industries, helping our clients design, construct and operate their assets to the highest levels of safety and performance.

Roles & Responsibility:

- Worked as a .NET Developer / shadow resource for application enhancements, performance optimization, SQL stored procedures, relational database views, and batch development.
- Developed components in Visual Studio using C#.NET, ASP.NET Core, Entity Framework, WCF services, Web API, and SQL Server while working independently and with large teams.

Capgemini | Online Recruitment System | Jan 2017 - Apr 2017

- Contributed to an online recruitment system that provided a platform for interaction between employers and jobseekers using WinForms, ASP.NET, and ADO.

EDUCATION

Qualification	Institute	Board / University	Year	Score
B.E. - Computers	Thakur College of Engineering and Technology	Mumbai University	2016	8.64 CGPA
XII	Elphinstone College, Mumbai	Maharashtra Board	2012	67.33%
X	Himalaya High School	Maharashtra Board	2010	72.30%

CERTIFICATIONS

- Completed training by Microsoft in Azure AI (AI-103).
- Microsoft certified in Azure Copilot (AB-900).
- Microsoft certified in Azure Developer (AZ-204).
- Microsoft certified in Azure Administration (AZ-104).
- Microsoft certified in Azure Fundamentals (AZ-900).
- Microsoft certified in Azure Networking (AZ-700).
- Completed Azure DevOps training from CRS Info Solutions.
- Completed Agile Software Development certification from University of Minnesota via Coursera.
- Completed L1 training conducted by Capgemini India.
- Completed PHP & MySQL and Linux certifications conducted by IIT Bombay in association with FOSS-TCET.

AWARDS & RECOGNITION

- Completed the ILead Program conducted by LTIMindtree India - 2026.

- Received ShootingStar Badge of Honor for outstanding performance - 2025.
- Received Silver Badge of Honor for outstanding performance and sincere work approach at account level - Q4 2022.
- Won Customer Delight Award under BU-level Rewards & Recognition - 2020.
- Awarded Tata Chemicals scholarship for academic achievements and overall excellence - 2014.
- Awarded merit-based scholarship from JJ Foundation for consistent academic performance - 2013.
- Winner of box cricket competition at LTIMindtree - 2025; winner of cricket competition at Capgemini - 2019.

ADDITIONAL PROFICIENCY

Computer applications and tools: Visual Studio, Visual Studio Code, SSMS, Azure Portal, Git, ALM, Azure DevOps, MS Word, MS Excel, MS PowerPoint, HP ALM, Putty, Crontab, WinSCP, Jira, Confluence, SNOW, BMC Remedy ITSM, DFM.

Operating systems and cloud: Windows XP/Vista/7/10/11 user level, Windows Servers, Linux, Unix, Microsoft Azure, AWS.
